

Psychology is the scientific study of how we think, behave, and come to know and understand our world. Psychologists study many different aspects of life such as memory, reasoning, language, consciousness, emotions, relationships, personality, and mental health. Their research ranges from understanding how the brain works throughout life; to understanding how groups of people work together as couples, families, organizations, cultures, or nations. As a science, it emphasizes the scientific method to observe, investigate and address psychological phenomena. Psychologists try to apply their knowledge to investigate or solve practical problems of human learning, growth and life.

Find your own voice. Our programs are student-oriented, with faculty readily available to discuss concepts and advise on issues related to your chosen concentration. Faculty members recognize and value the life experiences you bring to the program and strive to give you guidance that will enable you to find your own voice within the profession, whether you choose to pursue an advanced degree or go directly into the workforce.

Ambrose Advantages

Unique options. The Psychology Department offers majors in psychology, forensic psychology, or behavioral neuropsychology. The forensic psychology major—one of about 10 such undergraduate programs in the nation—differentiates itself from a traditional criminal justice major by focusing on applying the scientific knowledge of psychology to legal situations. Whatever your major, you will find that our faculty's diverse background in both psychological research and clinical practice have led to our ability to offer unique courses, research experiences, and internship courses. Many of our courses help students understand how to apply their knowledge and skills in psychology to careers in health and human services, or to advanced graduate studies.

St. Ambrose graduate program connections. Many of our majors who aspire to graduate or professional studies go on to success in master's and doctoral level programs at St. Ambrose. SAU graduate studies options include health sciences programs in occupational therapy, physical therapy, physician assistant studies, and speech-language pathology; and human services programs in social work and criminal justice.

Strong mentor relationships. Our students benefit from strong relationships with nine psychology faculty members with expertise in various experimental, clinical/counseling, neuroscience, and forensic areas. Majors can work collaboratively with psychology faculty on research projects through the Summer Research Institute, independent research practicums, or the Honors Program research

project. Students have recently presented their research work at local and regional conferences

Real world application. Internship and field experience courses allow students to experience real-world application of psychology at community agencies and sites. Students receive supervision on-site as well as by a faculty member.

Majors can choose from a wide range of internship sites. Some recent internship placements have included: Arrowhead Youth and Family Services, Center for Active Seniors, Child Abuse Council, Family Resources Programs, Genesis Health System, Salvation Army Adult Rehabilitation Center, Scott County Jail, Scott County Sheriff's Office, Stepping Stones After-School Program, and Vera French Mental Health Program.

Meaningful and formative experiences. Students are strongly encouraged to get involved in meaningful and formative experiences—joining the Psychology Club and Psi Chi (psychology international honor society), supporting community organizations, volunteering for campus activities, participating in research with faculty, getting practical work experience in the community, and becoming members of professional organizations. Students are encouraged to network with peers and people in the community.

Psychology and Forensic Psychology majors have secured competitive national summer internships, at sites such as the Mayo

Clinic, Florida International University, and Chicago's Children's Research Triangle. Behavioral Neuropsychology majors have completed the prestigious University of Iowa Interdisciplinary Summer Undergraduate Research Program in Neuroscience.

Career Opportunities

Graduates with bachelor's degrees in psychology often possess good research and writing skills, are good problem solvers and have well-developed, higher-level thinking abilities when it comes to analyzing, synthesizing and evaluating information.

Many find jobs in **administrative support, public affairs, education, business, sales, service industries, health, biological sciences and computer programming.** They may also work as **employment counselors, correction counselor trainees, interviewers, personnel analysts, probation officers, police officers,** and, of course, in the wide array of **human services and helping professions.**

Career Outlook

- > Employment opportunities for doctoral level psychologists will grow by 19% in the next eight years, according to the Bureau of Labor Statistics.
- > The undergraduate psychology major is a popular choice for students pursuing careers in Occupational Therapy, Speech-Language Pathology or Physical Therapy, all fields in which the employment rate is projected to grow by 21% or more, per the Bureau of Labor Statistics.
- > The 2016 U.S. News & World Report ranks the position of Behavioral Counselor or Substance Abuse Counselor in its top 100 careers because of the projected growth in the field, low unemployment rates, and median salary.

Opportunities for Advanced Studies

- Our students have recently gone on to graduate programs at:
- > Arizona State University, master's of psychology
 - > Indiana University, genetic counseling program
 - > Loyola University—Chicago, master's in community counseling
 - > St. Ambrose University, doctor of occupational therapy, doctor of physical therapy, master of social work
 - > St. Louis University, doctor of occupational therapy
 - > University of Alabama—Birmingham, clinical psychology PhD
 - > Washington University, doctor of physical therapy, master of social work
 - > Western Illinois University, master's in clinical mental health counseling

Where Some of Our Graduates Work

Organizations that employ St. Ambrose psychology programs alumni include:

- > Big Brothers/Big Sisters of the Mississippi Valley, program specialist
- > Families First Counseling Services, care coordinator
- > Iowa State Extension and Outreach, families program assistant
- > Jefferson Elementary (Davenport), special education paraeducator
- > Lutheran Social Services of Illinois, child welfare specialist
- > Madison Elementary (Davenport), paraprofessional
- > Quad Cities Autism Center, direct instructor
- > Rosecrance Health Network, recovery management specialist and substance abuse counselor
- > Texas Services for Veterans Families, case manager/program support specialist
- > U.S. District Court, Southern District of Iowa, Probation Services, pretrial officer
